KULKAN SECURITY

OVER 15 YEARS OF EXPERIENCE

KULKAN SECURITY PROVIDES STATE OF THE ART SECURITY SERVICES TO ORGANIZATIONS ALL AROUND THE GLOBE. WE'RE BASED IN **ARGENTINA, SOUTH AMERICA.**

We are happy to help our customers improve their security posture; we are confident of our expertise and experience.

REQUEST US TO:

- 1 **PREVENT** disclosure of your valuable assets by impersonating real-world attackers targetting your organization.
- 2 **REVIEW THE DESIGN** of your solutions prior to, during, or even after implementation.
- 3 **DISCOVER WEAKNESSES** in your external and internal network infrastructure. Are you properly segmenting and securing your core business? How about your guest network?
- 4 Impersonate employees or vendors, to **MEASURE IMPACT** in case of a malicious incident. Attacks don't just come from the Internet.
- 5 **SECURE YOUR IMPLEMENTATION** which handles credit card data, health data, personal information, media assets. We can validate if those watermarks are strong enough to remain on top.

MANUAL PENETRATION TESTING

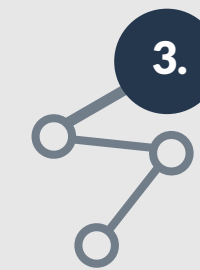

1.

APPLICATION SECURITY: For Web-based applications and services as well as stand-alone, Kulkan Security offers two main approaches at the time of auditing your systems and applications: Source Code Reviews and/or Black-box testing. In both cases, the audit process is essentially manual, that way beating in quality of results any existing automated solution.

2.

MOBILE APPLICATIONS: A manual approach at breaking Mobile applications. Test how your applications communicate with its server infrastructure and whether they behave properly in user devices. Kulkan Security has extensive experience in multiple platforms and device environments.

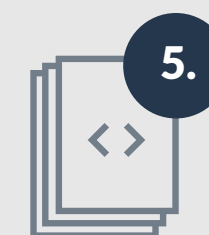

3.

NETWORK AND WIRELESS: Our Network and Wireless Penetration Testing services mimic an attacker's attempt to break into your network infrastructure, gain access to your databases, financial records and customer information, among other sensitive areas.

4.

CLIENT-SIDE ATTACKS: We can help you identify points of entry to your internal network by targetting your employees and their mobile/work stations.

5.

SOURCE CODE REVIEWS: Extensive experience at a wide range of programming languages; our experts will manually inspect your code base looking for language-dependant, common, and very application-specific vulnerabilities.

SECURITY STANDARDS

MPAA

Motion Picture Association
of America

Whether you develop software that handles sensitive content and/or your network infrastructure is required to comply with security guidelines developed by the Motion Picture Association of America We can help discover weaknesses in your current solution; ranging from Watermark bypassing techniques to state of the art penetration.

HIPAA

Health Insurance Portability
and Accountability Act

Does the Health Insurance Portability and Accountability Act require your organization to perform a periodic technical evaluation? We can help. Our penetration testing services deliver the analysis your organization needs to consolidate privacy and integrity of your healthcare data.

PCI

Payment Card
Industry

By ready prior to your Payment Card Industry Data Security Standard evaluation. Our Quarterly vulnerability scanning package can help you identify and remediate weaknesses prior to your PCI DSS evaluation.
